

#527 First Love Fountain

Items Required For Assembly

160 GPH Pump	(not provided)
Rubber Stopper	(provided)
1/2" ID Clear Vinyl Tubing	(provided)
Clear Silicone Sealer	(not provided)

- 1) Place base (A) on a firm, level surface. Lift up one side of the base approximately 3" by placing some wood under the base where the groove is located.
- 2) Place bowl (B) onto the base (A).
- 3) Place pump in the bottom of bowl (B). Pass the electrical cord through the PVC coupling at the bottom of the bowl, through the base, and out the bottom of the base where the groove is located.
- 4) Remove the wood holding up the base (A) and gently lower the base to the ground.
- 5) Pull the electrical cord out the bottom of the base so that approximately 6" remains inside the bowl (B).
- 6) Take the rubber stopper and apply silicone sealer in the center hole. Open the stopper and place around the electrical cord. Apply silicone sealer around the outside and along the inner cut of the stopper and insert fully into the PVC coupling at the bottom of the bowl.
- 7) Pour a small amount of water into the bowl (B) so that the rubber stopper is submerged. Check to make sure that the water is not leaking through the rubber plug. If you find water is leaking, remove the rubber plug, and return to step 6.
- 8) Carefully place the pumphouse (C) into the center of the bowl (B) over the pump. For added stability, place some silicone sealer or permagum strips between the large bowl and the bottom of the pumphouse.
- 9) Slip one end of the 1/2" ID vinyl tubing into the bottom of the umbrella (E)
- 10) Place the statue (D) onto the pumphouse (C).
- 11) Carefully place the umbrella (E) into the PVC pipe in the statue (D) so that the vinyl tubing extends through the statue (D) and down into the pumphouse (C). This may be a tight squeeze for the vinyl tubing.
- 12) With assistance from another person, gently tip the statue and umbrella and attach the free end of the vinyl tubing to the outlet of the pump. Make sure that when you tip the statue back into place, the tubing is not kinked so as to restrict water flow. You may cut the vinyl tubing if necessary. For added stability, place some silicone sealer or permagum strips between the bottom of the statue (D) and the top of the pumphouse (C).
- 13) Fill the large bowl (B) with water so that the pump is completely submerged.
- 14) Plug the pump into a GFCI protected outlet. Adjust the flow of water as necessary using the flow control dial on the pump
