

Figurine Style Fountain (1 Tier)

These are generic assembly instructions for all styles of Figurine Fountain (1 Tier).
The actual styling of your fountain may differ from the one shown.

Items Required For Assembly

Submersible Pump (not provided)
Vinyl Tubing (provided)
Clear Silicone Sealer (not provided)

- 1) Place base (A) on firm, level surface.
- 2) For maximum stability, put a bead of silicone along the outer edge of the top of the base (A).
- 3) Carefully place the bowl (B) onto the base (A).
- 4) Place the pump in the pumphouse cavity at the back of the bowl (B). Drape the electrical cord over the rear rim of the bowl where the groove is located.
- 5) Push the vinyl tubing into the hole at the bottom of the figurine (C). If the figurine has a copper tube extending from the bottom, slide a free end of the vinyl tubing over the copper tube.
- 6) Gently place the figurine (C) onto the rear pumphouse area of the bowl.
- 7) Carefully tip the figurine (C) back and attach the free end of the vinyl tubing to the outlet of the pump. After the tubing is attached, lower the figurine back onto the pumphouse. Make sure the vinyl tubing is not kinked as this will impede water flow. You may cut the tubing as necessary. For maximum stability, put a bead of silicone between the top rim of the pumphouse and the bottom of the figurine (C).

- 8) Fill the bowl (B) with clean water . Make sure the pump is completely submerged.
- 9) Plug the pump into a GFCI protected outlet. Adjust the water flow as necessary using the flow control on the pump.
- 10) Enjoy your new fountain!
